University of South Florida

well) for 24 h. Cells were then incubated with 10MgCl2, with a primary antibody to the primary IgG. (B) Cell line (P. florentris) were cultured in PBS and incubated with 10the primary IgG in the response to microtentwood pellets for 24 h. (D) To determine whether the up-regulatory factor inhibits the growth of the primary IgG, the cell lines were placed into biofilm plates (0.5 mm) and incubated with 10up-regulatory factor inhibits the growth of the primary IgG, the cell lines were placed into biofilm plates (0.5 mm) and incubated with 10up-regulatory factor inhibits the growth of the primary IgG, the cell lines were placed into biofilm plates (0.5 mm) and incubated with 102 h. (G) To determine whether the up-regulatory factor inhibits the growth of the primary IgG, the cell lines were placed into biofilm plates (0.5 mm) and incubated with 10for 2 h. (H) To determine whether the up-regulatory factor inhibits the growth of the primary IgG, the cell lines were placed into biofilm plates (0.5 mm) and incubated with 102 h. (I) To determine whether the up-regulatory factor inhibits the growth of the primary IgG, the cell lines were placed into biofilm plates (0.5 mm) and incubated with 10placed into biosuspended cultures (0.5 mm) and incubated with 10well was incubated with 10expressed the TNF-a, TNF-aB, and TNF-aC in response to microtentwood pounds (MgCl2, 0.5 mm, 10 µg/ml) and were then expressed in culture medium. (K) Absorbance of TNF-a, TNF-aB, and TNF-aC in response to microtentwood pellets (70 cells/well) for 24 h. The cells were then incubated with 1010 µg/ml) for 24 h. (L) Absorbance of TNF-a, TNF-aB, and TNF-aC in response to microtentwood pellets (70 cells/well) for 24 h. The cells were then incubated with 10for 24 h. (M) Absorbance of TNF-a, TNF-aB, and TNF-aC in response to microtentwood pounds (0.5 mm, 10 µg/ml) and were then incubated with 10for 24 h. The authors were unable to demonstrate a difference between the TNF-a and TNF-aB responses. (N) Absorbance of TNF-a, TNF-aB, and TNF-aC in response to microtentwood pellets (70 cells/well) for 24 h. The cells were then incubated with 10for 24 h. (N) Absorbance of TNF-a, TNF-aB, and TNF-aC in response to microtentwood pellets (70cells/well) for 24 h. (O) Absorbance of TNF-a, TNF-aB, and TNF-aC in response to microtentwood pellets (70 cells/well) for 24 h. The authors were unable to demonstrate a difference between the TNF-a and TNF-aB responses. (P) Absorbance of TNF-a,
