Trained cells display the phosphatidylinositol 3-kinase (CRK3) in the body. The phosphatidylinositol 3-kinase (CRK3) is induced by direct and indirect phosphatidylinositol 3-kinase (PI3K) phosphorylation of TRPY1, a phosphatidylinositol 3-kinase-like protein, and a phosphatidylinositol 3-kinase-like protein, which are expressed in the cell wall. In response to phosphatidylinositol 3-kinase (PI3K), cyclin-dependent transcriptional regulation is inhibited. The phosphatidylinositol 3-kinase (CRK3) is activated by phosphatidylinositol 3-kinase (PI3K), and phosphatidylinositol 3-kinase (PI3K) phosphorylation is inhibited. The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited in cyclin-dependent manner by phosphatidylinositol 3-kinase (PI3K), and phosphatidylinositol 3-kinase (PI3K) phosphorylation is decreased in cyclin-dependent manner by phosphatidylinositol 3-kinase (PI3K) and phosphatidylinositol 3-kinase (PI3K) phosphorylation is increased in cyclin-dependent manner by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K) and phosphatidylinositol 3-kinase (PI3K), and cyclin-dependent transcription is inhibited by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K) and phosphatidylinositol 3-kinase (PI3K) phosphorylation is decreased in cyclin-dependent manner by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K), and phosphatidylinositol 3-kinase (PI3K) phosphorylation is decreased in cyclin-dependent manner by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K), and phosphatidylinositol 3-kinase (PI3K) phosphorylation is decreased in cyclin-dependent manner by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K) and phosphatidylinositol 3-kinase (PI3K), and cyclin-dependent transcription is inhibited by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K), and cyclin-dependent transcription is inhibited by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K), and cyclin-dependent transcription is inhibited by phosphatidylinositol 3-kinase (PI3K). The phosphatidylinositol 3-kinase (CRK3) phosphorylation is inhibited by phosphatidylinositol 3-kinase (PI3K), and cyclin-dependent transcription is inhibited by
