Raja, J.B.M. Balasubramanian, S.S. Jain, A.S. Sherwood, and J.W. Smith. 2010. Low-level transduction-associated mutation of other APC genes in the human gastrointestinal tract. *Cell. Mol. Immunol.* 45: 256–266. 13. Baxendale, M.A.M., G.G. Finit, P.D. Roberts, J.W. Jones, and P.D. Roberts. 1998. A somatic and somatic proteomic pathway to the degradation of monocyte pro- teins during the intestinal epithelial response to host inflammatory factors. *J. Immunol.* 165: 5146–5162. 14. Butt, S., I.D. Thomson, J.J. Blomfield, and P.J. Ellis. 2007. The endoplasmic reticulum: signaling pathways and their role in gastrointestinal epithelial disease. *Cell. Mol. Cell.* 15. Butt, S., S.P. Dixit, and M.H. Muralidhar. 2003. Differential effects of LPS on the endoplasmic reticulum against macrophage and other inflammatory cells. *J. Immunol.* 185: 1545–1550. 16. Butt, S., R.J. Reynolds, C.J. Reynolds, and R.E. Reynolds. 2003. Molecular mechanisms of LPS resistance against both Gram- negative and Gram-positive bacteria. *J. Immunol.* 182: 165–167. 17. Bachman, A., S. Schweikert, R. Macara, and J.I. Macara. 1999. Plasmids and receptor binding in disease states. *Carcinogenesis* 20: 18. Bachman, A., C. Balasubramanian, J.S. Schweikert, and J.I. Macara. 1996. A novel epithelial cell receptor: ARG1. *Cell. Mol. Biol.* 22: 563–567. 19. Bachman, A., S. Schweikert, J.A. Schweikert, and J.I. Macara. 1995. The ARG1-mediated heterologous binding of LPS in gastric cancer. *J. Immunol.* 185: 2004–2009. 20. Bachman, A., S. Schweikert, J.A. Schweikert, and J.I. Macara. 1997. A novel ARG1-mediated heterologous binding of LPS in gastric cancer. *Cell. Mol. Biol. Rev.* 25: 928–939. 21. Bachman, A., M. Schweikert, A. Al-Wawi, H.A. Istikhanen, and J.I. Macara. 1999. The ARG1 signaling cascade functions in gastric cancer. *Cancer* 22. Bachman, A., S. Schweikert, J.A. Schweikert, and J.I. Macara. 1999. The ARG1-mediated heterologous binding of LPS in gastric cancer. *J. Immunol.* 185: 1712–1716. 23. Batista, L., and M. Z. Cai. 2003. TRIP-6/5/7 and TRIP-6/7- binding are critical for the efficient degradation of drug- resistant LPS by human gastric epithelial cells. *Cancer Cell* 22: 24. Bae, J., J.R.P. Eyal, M. Blanco, A.P. Mas, and J.C. Pardo. 2005. The TRIP-6/7-and TRIP-6-binding protein is essential for the binding of LPS to human macrophages. *EMBO J.* 25. Bae, J., J.R.P. Eyal, M. Blanco, A.P. Mas, and J.C.Pardo. 2006. The TRIP-6/7-and TRIP-7-binding protein is negatively regulated by LPS in human gastric epithelial cells. *Mol. Cell. Biol.* 7: 803– 26. Bae, J., J.R.P. Eyal, M. Blanco, A.P. Mas, and J.C.Pardo. 2008. The TRIP-6/7-and TRIP-7-binding proteins are critical for the binding of LPS to human macrophages. *EMBO J.* 28: 907–911. 27. B
