Figure 6. p27 is involved in the cell cycle arrest and apoptosis. (A) phagocytic activity of the apoptotic cells of the p27 KO cell line. The apoptotic cells were stably suppressed by the p27 DUSP inhibitor p27-DUSP1. The apoptotic cells were stimulated by the p27 DUSP inhibitor p27-DUSP1. The p27 DUSP inhibitor p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (C)The apoptotic cells were stimulated by the p27 P-01 inhibitor p27-P-01-FMA1. The apoptotic cells were stimulated by the p27 P-01 inhibitor p27-P-01-FMA1. As shown in A and B, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (D)The apoptotic cells were stimulated by the p27 P-01 inhibitor p27-P-01-FMA1. As shown in A and B, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (E)The apoptotic cells were stimulated by the p27 DUSP1 inhibitor p27-DUSP1. As shown in E, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (F)The apoptotic cells were stimulated by the p27 DUSP1 inhibitor p27-DUSP1. As shown in F, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (G)The apoptotic cells were stimulated by the p27 DUSP1 inhibitor p27-DUSP1. As shown in G, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. The apoptotic cells were stimulated with p27-DUSP1 in the p27 KO cell line. As shown in G, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (H)The apoptotic cells were stimulated with p27-DUSP1 in the p27-DUSP1 KO cell line. As shown in H, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (I)The apoptotic cells were stimulated with p27-DUSP1 in the p27 KO cell line. As shown in I, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. (J)Inhibition of p27-DUSP1 prevents apoptosis. In the p27 KO cell line, the apoptotic cells were stimulated by the p27 DUSP1 inhibitor p27-DUSP1. As shown in J, p27-DUSP1 was used to knock down the p27-DUSP1-induced apoptotic cells in the p27-DUSP1 KO cell line. Cytokine release p27-DUSP1, a downstream target of the PI3K signaling cascade, is released in response to a variety of intracellular stimuli, such as phosphorylation of ERK and its phosphorylation by the PI3K pathway. To investigate the role of p27 in the release of the p27-DUSP1- expression, we analyzed the phosphorylation status of the p27-DUSP1 and its downstream targets in the p27-DUSP1 KO cell line. Activation of p27-DUSP1 by P-01, a proPO-protein and a PI3K signaling
