Protective Effects of Induction of Cytokine Release by Chlamydiae by *Bacillus subtilis* Allosteric Acid (T33) in Cancer Cells *Oncogene* K. K. Dang et al. / *Cytokine* 35 (2006) 245–254

1. Natarajan K, Benjamini A, Fadl S, et al. (2013) Wound-healing checkpoint inhibitor, Teflon, could be useful in the treatment of renal disease. *J Clin Endocrinol Metab* 2. Zahid A, Bishama H, Bhatnagar J, Mandal S, et al. (2013) TGF-beta1-induction is an activated protein kinase and is necessary for TGF-beta1-induction in tumor cells. *J Cell Sci.* 69:1148–1152.
3. Chen X, Zhou J, Zhou Y, et al. (2013) TGF-beta1 activates the transcription of tumor suppressor genes through a novel mechanism. *J Cell Sci.* 71:4072–4076.
4. Dang Z, Xie Y, Bhatnagar J, et al. (2013) Activation of the TGF-beta1 pathway promotes the activation of PKA and protects renal epithelial cells from other mechanisms of tumorigenesis. *J Cell Sci.* 73:948–958.
5. Teng Y, Yang J, Cheng C, et al. (2013) Activation of the TGF-beta signaling pathway through the phosphorylation of Mcl-1 and phosphorylation of p38. *Oncogene* 6. Shijin S, Ma R, Wu Y, et al. (2013) Transcriptional inhibition of a human tumor suppressor gene, Bcl-2, promotes renal tumor metastasis. *Cancer* 7. Dai J, Dai Y, Yu J, et al. (2013) Activation of Bcl-2 has anticancer promoter in renal epithelial cells. *J Cell Sci.* 75:1101–1107.
8. Meng W, Daekwal A, et al. (2013) Activation of the phosphoprotease-2 pathway promotes the activation of p38, a human prostate cancer suppressor. *J Cell Sci.* 78:5196–5206.
9. Li L, Xia L, et al. (2012) Activation of the TGF-beta1 pathway and the p38 signaling pathway in renal cancer. *J Cell Sci.* 10. Baquet J, Cimini G, et al. (2010) The p38 signaling pathway involves a transcriptional and nuclear factor kappa B-dependent pathway. *J Cell Sci.* 82:5408–5408.
11. Zhang J, Shen H, et al. (2013) The p38/JNK pathway promotes tumor adhesion and invasion via the activation of p38. *J Cell Sci.* 86: 12. Dang Z, Chen X, et al. (2013) Upregulation of TGF-beta1 and Bcl-2 signaling by caspase-1 and other c-Jun kinases is associated with apoptosis. *Cancer Res.* 63:138–149.
13. Yang J, Zhang J, et al. (2013) Activation of the Notch/Notch2 and Notch/Notch3-regulated p38 signaling cascade by p38. *Oncogene* 14. He J, et al. (2012) The Notch/Notch2 pathway mediates the apoptosis-induced apoptosis of human lung carcinoma cells. *Biochemistry and Molecular Biology Bulletin* 15. Bhatnagar J, Mandal S, et al. (2013) Activation of Notch/Notch2/ Notch3-regulated p38 signaling pathway is associated with the apoptosis. *J Cell Sci.* 67:6161–620.
16. Zhang J, Xiao H, et al. (2013) Upregulation of the Notch/Notch2-caspases by caspase-1 is associated with apoptosis. *J Cell Sci.* 71: 17. Kang HY, et al. (2011) Activation of Notch/Notch3-regulated p38 pathway is associated with apoptosis-induced apoptosis. *Oncogene* 18. Bhatnagar J, Mandal S, et al. (2013) Upregulation of Notch/ Notch3-regulated p38 signaling pathway is associated with apoptosis- induced apoptosis. *J Cell Sci.* 71:
