

DelhiA major Indian pharmaceutical firmBHP Billiton Ltd

**James Farley, Nicholas Thompson, Emily Fields, Jennifer
Conner, Jamie Carey**

Royal Adelaide Hospital

The proposed vaccine would be developed by a new vaccine that would be designed to block H5N2 in humans. The vaccine would be administered in four stages via a pacemaker in the blood of a human, before the vaccine is administered to the patients at the medical clinic in the hospital. A revised version of the vaccine is expected to be developed in the next few months. The Vaccines Act of 2008 (CA) allows the use of vaccine in its current form as a vaccine against H5N2 disease. The vaccine has been approved by the General Immunization Council of India (GIC) for use in the treatment of H5N2-infected human subjects. The vaccine is safe and effective. The vaccine is in its development stage with the approval of the Immunization Council of India (ICI) for the trial as a vaccine against H5N2-infected human subjects. The vaccine is in its early stages with the approval of the ICI for the trial as a vaccine against H5N2-infected human subjects. The vaccine is safe and effective. —end of text
