Introduction

HDR-1K6 (HDR-1K6) is a small RNA-binding protein (SGP) encoded by two S-terminal residues of the HZ-2-kappa-coupling domain. It is a member of a long family of RNA-binding proteins, and its role in the transcriptional regulation of cell death is well known.

The HDR-1K6 receptor is a membrane bound SGP, which is a member of an RNA-binding protein family. It is also a member of a long family of RNA-binding proteins, including the HDR-1KK6 and HDR-1 SGP, and has been described previously [5]. It is a member of a family of RNA-binding proteins known as HDR1K1, HDR1K2, and HDR1K4 [6].

HDR-1K6 is a member of a family of RNA-binding proteins known as the HDR1K7 and HDR1S/M protein family [7]. The HDR-1K6 receptor is a member of a family of RNA-binding proteins known as HDR1K5, HDR1K6, and HDR1S/M protein family. The HDR-1K6 receptor is a member of a family of RNA-binding proteins known as HDR1K6 (HDR-1K6) and is known as a member of a family of RNA-binding proteins known as HDR1K5 (HDR-1K6) [8]. The HDR-1K6 receptor is a member of a family of RNA-binding proteins known as the HDR1K7 and HDR1S/M protein families [9]. In the present study, we have shown that the HDR-1K6 receptor plays a key role in the apoptosis-induced apoptosis of human pancreatic beta cells by the HDR-1K6 receptor. Taken together, these results indicate that the HDR-1K6 receptor plays a key role in the apoptosis-induced apoptosis of human pancreatic beta cells. HDR-1K6 HDR-1K6 is a small RNA-binding protein (SGP) encoded by two S-terminal residues of the HZ-2-kappa-coupling domain. It is a member of a long fam-

ily of RNA-binding proteins known as the HDR1K1, HDR1K2, and HDR1K4 [6]. It is also a member of a family of RNA-binding proteins known as the HDR1K5 and HDR1K6 [9]. The HDR-1K6 receptor is a member of a family of RNA-binding proteins known as the HDR1K7 and HDR1S/M protein family. The HDR-1K6 receptor is a member of a family of RNA-binding proteins known as HDR1K6 (HDR-1K6) and is known as a member of a family of RNA-binding proteins known as HDR1K6 (HDR-1K6) [9]. To date, HDR-1K6 is the only SGP that is not a SGP-binding protein, and it is the only SGP-binding protein that has not been shown to interact with HDR-1K6 [10]. To date, HDR-1K6 is the only SGP that is not a SGP-binding protein, and it is the only SGP that has not been shown to interact with HDR-1K6 [10]. To date, HDR-1K6
