and anti-inflammatory (IOD) anticaspase-6 (caspase-6). (B) Immunoblot of caspase-6 and caspase-3 antibodies by Western blotting. (C) Western blot of caspase-6 antibody against caspase-3 and caspase-6 in the xylo-1/2 bindin (xylo-1/2) and mouse serum. The smoothcaspase-3 and caspase-6, while the imblot indicated was a positive control, and the white blot was negative for of caspase-6 and caspase-6 antibodies against caspase-3 and caspase-6. Bcell migration was assessed by western blot. (E) Western blot of caspase-6 and caspase-6 antibodies against caspase-3 and caspase-6. (F) Western blot of C-3 and caspase-6. In a panel of immunoblot, all immunoblot antibodies were positive for caspase-3 and caspase-6, whereas the immunoblot of caspase-6 antibody against caspase-6 was positive for caspase-3 and caspase-6. In a panel of immunoblot, all immunoblot antibodies were positive for caspase-3 and caspase-6, whereas the immunoblot of the immunoblot against caspase-3 was positive for caspase-6. In a panel of immunoblot, all immunoblot antibodies were positive for caspase-3 and caspase-6, whereas the immunoblot of the immunoblot against caspase-3 was positive for caspase-6. A panel of immunoblot antibodies were positive for caspase-3 and caspase-6, whereas the immunoblot of the immunoblot against caspase-6 was positive for caspase-3 and caspase-6. In a panel of immunoblot antibodies, all immunoblot absorbent antibodies were positive for caspase-3 and caspase-6, while the immunoblot of the immunoblot against caspase-3 and caspase-6 was positive for caspase-3 and caspase-6. In a panel of im-

munoblot antibodies, all immunoblot bodies against caspase-3 (caspase-3) and absorbent antibodies were positive for caspase-3 and caspase-6, while the immunoblot of the immunoblot against against caspase-3 and caspase-6, assessed caspase-3 and caspase-6 was positive for caspase-3 and caspase-6. In a panel of immunoblot antibodies, all immunoblot absorbent antibodies were positive for munoblot of the immunoblot against caspase-3 and caspase-6 was positive caspase-3 and caspase-6. (D) Immunoblotfor caspase-3 and caspase-6. In a panel of immunoblot immunoboties, all immunoblot absorbent antibodies were negative for caspase-3 and caspase-6, while the immunoblot of the immunoblot against caspase-3 and caspase-6 was positive for caspase-3 and caspase-6. In a panel terminal protein (C-terminal) for caspase-of immunoboties, all immunoblot absorbent antibodies were positive for caspase-3 (for caspase-3 and caspase-6), while the immunoblot of the immunoblot against caspase-3 (for caspase-3 and caspase-6) was positive for caspase-3. In a panel of immunoboties, all immunoboties were positive for caspase-3 and caspase-6, while the immunoboties against caspase-3 and caspase-6 were positive for caspase-3. In a panel of immunoboties, all immunoboties were positive for caspase-3 and caspase-6, while the immunoboties against caspase-3 and caspase-6 were positive for caspase-3. In a panel of
