Pune 3.5.6.1 Low-level binding of p38 to the p27A1 protein Lepre1 protein inhibits Smad2 phosphorylation in human glioblastoma cells Fig. 3. Lowlevel binding of p38 to p27A1. binding of p38 to p27A1 is shown by immunofluorescence analysis. The binding of p38 to p27A1 was inhibited by the anti-p38 antibody as compared with the anti-p27A1 antibody. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. 3.5.7.1 Smad2 and p38 phosphorylation are reduced by increasing the p38 concentration in glioma cells The binding of p38 to p27A1 is shown by immunofluorescence analvsis. The binding of p38 to p27A1 was inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. 3.5.8.1 Binding to p38 in glioma cells by the anti-Smad2 antibody The binding of p38 to p27A1 was inhibited by the anti-Smad2 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. 3.6.1.1 Binding of p38 to p27A1 by the anti-Smad2 antibody The binding of p38 to p27A1 was inhibited by the anti-Smad2 antibody. The to p27A1 was inhibited by the anti-2E binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also in-

hibited by the anti-p38 antibody. The bound p38 was also inhibited to p27A1. The bound p38 in the glioma cells was then analyzed by the various assays. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also inhibited by the anti-p38 antibody. The bound p38 was also inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The binding of p38 to p27A1 was also inhibited by the antip38 antibody. The bound p38 was also inhibited to p27A1. The bound p38 in the glioma cells was then analyzed by the various assays. The bound p38 was then analyzed by the various assays. The bound p38 was also blocked by the anti-p38 antibody. The bound p38 was also blocked by the anti-p38 antibody. The bound p38 was then blocked by the anti-Smad2 antibody. The bound p38 was also blocked by the anti-Smad2 antibody. The bound p38 was then analyzed by the various assays. The FIG 6. Binding of p38 to p27A1 in human glioma cell lines. The binding of p38 to p27A1 was inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was inhibited by the anti-p38 antibody. The binding of p38 to p27A1 was inhibited by the anti-1H binding antibody. The binding of p38 to p27A1 was inhibited by the anti-2H binding antibody. The binding of p38 to p27A1 was inhibited by the anti-2H binding antibody. The binding of p38 to p27A1 was inhibited by the anti-2D binding antibody. The binding of p38 binding antibody. The binding of p38 to p27A1 was inhibited by the anti-2F binding antibody. The binding of p38
