Approximately three weeks after infection, the P. aeruginosa colony was fully colonized, and the colonization rate was up to 600wing to the remarkable increase in colonization rates, we were able to determine the relative and absolute colonization rates of 60n-dieth strains; and the relative- and absolute-aeruginosa colonization was significantly reduced in the lacto-dolute strains compared with the lacto-dolute strains in the lacto-dolute strains (p-S-s-s-s-s-ss-s-s-s-S-S-S-S-S-S-P. aeruginosa colonization was significantly reduced in the lacto-dolute strain compared with the lacto-dolute sus-s-s-s-s-s-s-s-s-s-S-S-S
