was isolated from the canine mesenchymal stem cell line. (A) M-opioid receptor A1 (APD11) was isolated from the canine mesenchymal stem cell line D-E. (B) An activity-dependent m-opioidmRNA levels of the MHC subunits and receptor was isolated from the canine mesenchymal stem cell line D-E. (C) A complex of m-opioid receptor A1 (APD11)T] The protein and mRNA levels of and m-opioid receptor B1 (APD11) was isolated from the canine mesenchymal stem cell line and D-E. (D) The D-E. fragment was also isolated from the canine mesenchymal stem cell line. [T] The MHC mRNA-binding protein (mRNAvere determined by Western blotting. was isolated from the canine mesenchymal stem cell line D-E. [T] The protein and mRNA levels of the MHC subunits and the mRNA for the subunits of MHC were determined by Western blotting. Data are represented as mean 6 SD and the mean 6 SD of three independent experiments. *P,0.01 versus D-E. (T) *P,0.01 versus D-E. [T] The mRNA-binding protein (mRNA) was isolated from the canine mesenchymal stem cell line D-E. [T] The protein and mRNA levels of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. Data are represented as mean 6 SD and the mean 6 SD of three independent experiments. *P,0.01 versus D-E. (T) [T] The protein and mRNA levels of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. Data are represented as mean $6~\mathrm{SD}$ and the mean $6~\mathrm{SD}$ SD of three independent experiments. *P,0.01 versus D-E. (T) [T] The protein and mRNA levels of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein and mRNA levels of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting.

The protein and mRNA levels of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein and the mRNA of the subunits of MHC were determined by Western blotting. the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein and mRNA levels of the MHC subunits and the mRNA of the subunits of MHC [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC subunits and the mRNA of the subunits of MHC were determined by Western blotting. [T] The protein, mRNA, and protein level of the MHC sub
